

Forklift Fork Positioner

Forklift Fork Positioner - A fork positioner is a device constructed out of high quality materials meant to endure the most difficult operations and work environments. This particular piece of equipment can enable the one driving to be able to work the forks hydraulically without leaving the seat. Side shifting units have the added ability to laterally position the entire load or the arms in order to facilitate more precise carrying and placement in a faster and much more effective manner.

The unique fork pocket design could enable the person operating it to be able to safely sway the unit's forks without any worry of damaging the positioning cylinders. This could allow the worker the choice to either execute independent or simultaneous blade movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are necessary. Standard OEM carriages could be converted into fork positioners on available units.
